LAUMAS[®]
Innovation in Weighing

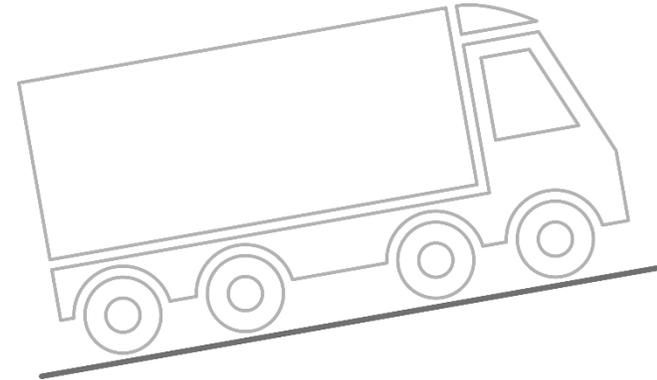

INCLINOMETER FUNCTION: ON BOARD WEIGHING

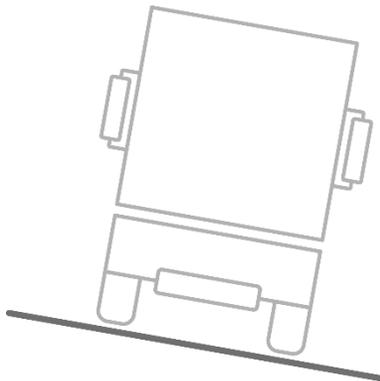

ALWAYS A CORRECT WEIGHT

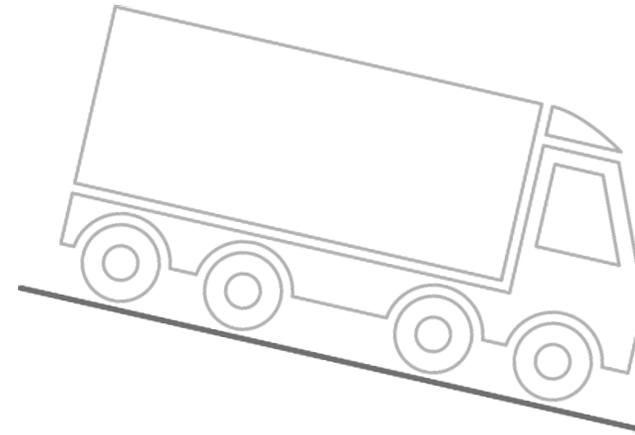

1000 kg = 1000 kg displayed

1000 kg = 1000 kg displayed

1000 kg = 1000 kg displayed

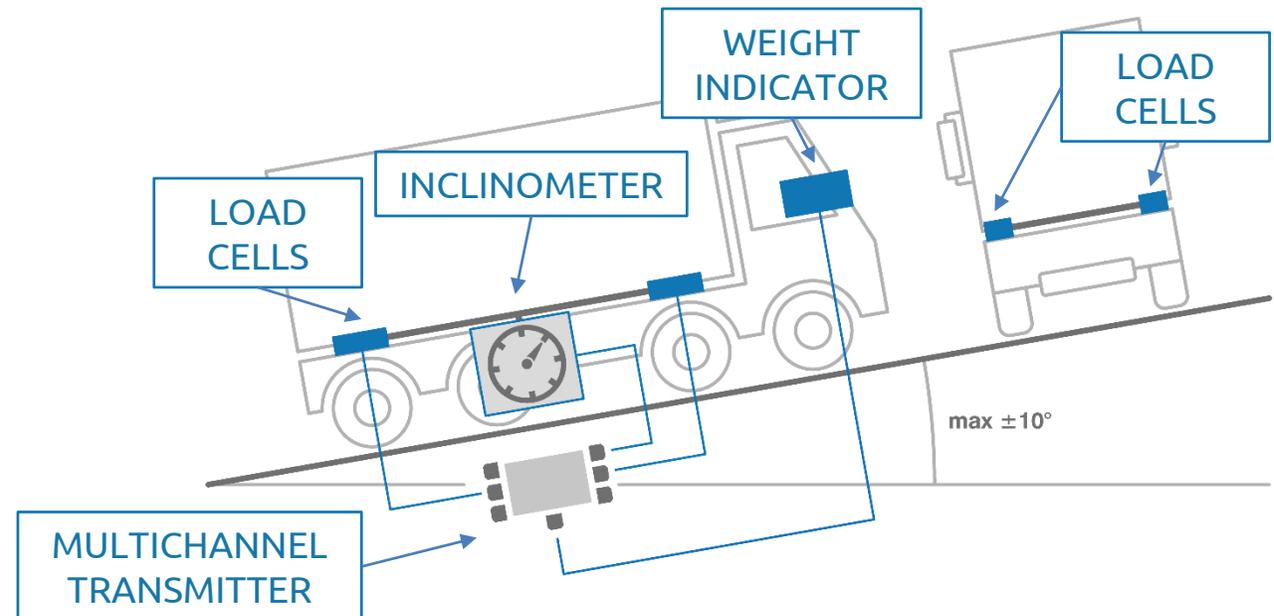

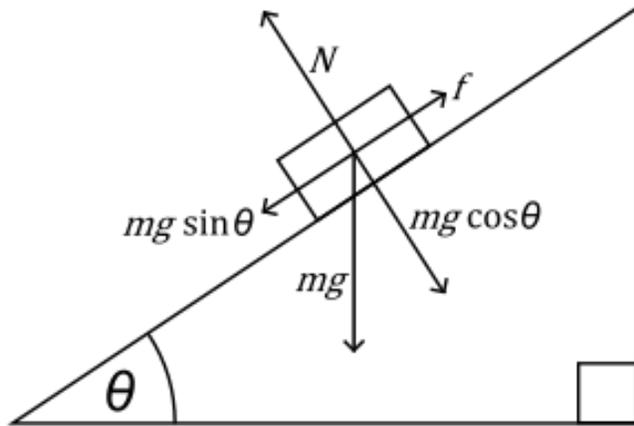

1000 kg = 1000 kg displayed

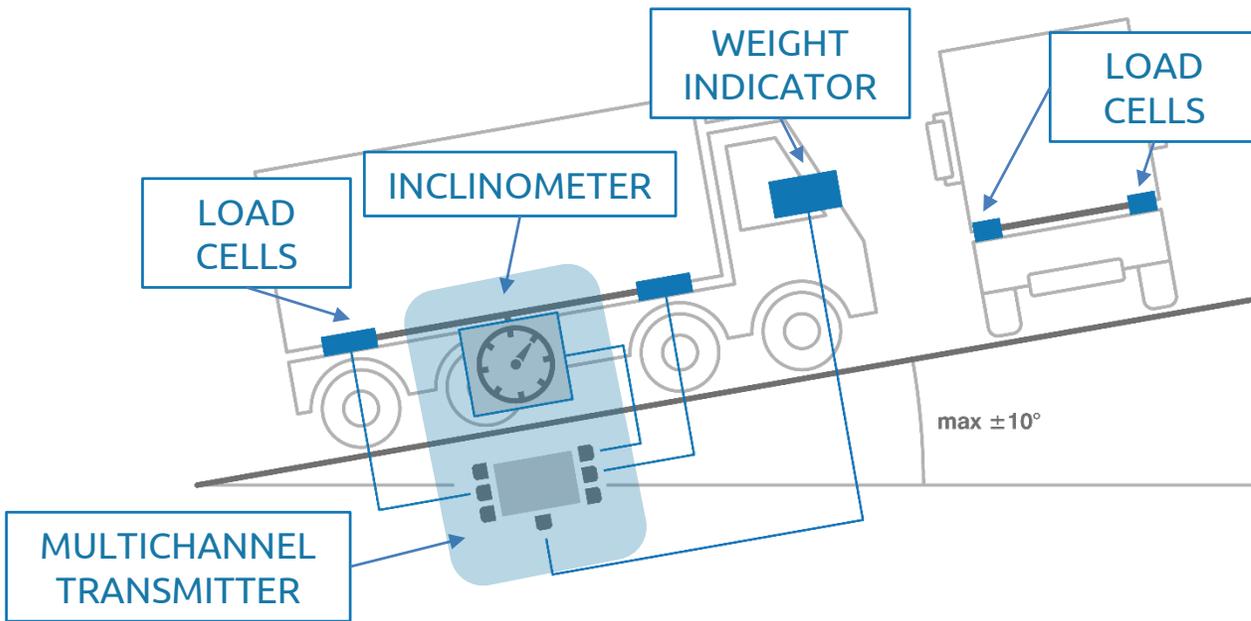

SLOPED WEIGHING SYSTEM: THE PROBLEM

Plane inclination effects on the weighing system

- Load cells measure only the vertical component of the weight
- The calculated weight values is distorted by the inclination
- The value of the weight changes depending on the plane inclination

SLOPED WEIGHING SYSTEM: LAUMAS SOLUTION

Inclination compensation system

- Multi-channel transmitter
- Biaxial incline sensor mechanically connected to the weight receptor
- Weight indicator
- The weight transmitter exploits the incline sensor reading to correct the calculated weight, removing the distortion introduced by the inclination

INCLINATION COMPENSATION: LAUMAS SOLUTION

Maximum operative
interval: $\pm 10^\circ$

Two levels of tilt
compensation available

Maximum allowed tilt
configurable for each axis:
associated tilt function

OIML R 76 certified
(Class III – 5200 VSI –
2 intervals / 2 ranges)

INCLINOMETER: TARGETS AND RESULTS
